

On-line Mental Health Treatments boosted by American Partnership

Birmingham based CCBT Limited is pleased to announce a partnership with American Company Cobalt Therapeutics resulting in a shared vision of 'Being recognised as the leading, gold-standard provider of eHealth programs and innovations by researchers, clinicians, patients and consumers worldwide'.

CCBT Limited is a world-leader in the development and provision of on-line mental health treatments such as FearFighter™ (Recommended by the National Institute for Clinical Excellence for being clinically and cost effective). The company has created a proprietary development platform whereby treatments and customisation of products can be developed effectively and efficiently. This has led to the development of programs for customers on three continents across five countries and four languages.

Cobalt Therapeutics is a private company founded to maximise access to scientifically validated, cost effective mental health interventions.

The partnership brings to CCBT: investment for the further development of products to provide a comprehensive treatment range; access to products including treatments for Insomnia (REStore) and Alcohol and Substance abuse (SHADE); and a route to market in America for its own proprietary products.

Nick Niziolomski (CEO of CCBT) commented that 'slowly it is becoming recognised globally that mental health issues have a significant adverse social and economic affect. Treatments to-date have been limited in supply and are costly. However, on-line cognitive behavioural therapy treatments are being proven to be clinically effective. They would allow treatment to be provided to a far greater volume of people, 24/7 and with greater cost effectiveness. The partnership with Cobalt provides a significant stepping stone for the Company enabling us to provide a range of treatments and to create a greater awareness of their availability'.
